MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Sat May 13 07:05:41 2000; MasPar time 79.42 Seconds 5.752 Million cell updates/sec

Tabular output not generated.

Description: Perfect Score: Sequence: >US-08-991-628-3 (1-15) from US08991628.pep 96 1 LNSKIAFKIVSQEPA 15

Scoring table:

PAM 150 Gap 15

Searched: 83857 seqs, 30454973 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot38 1:swissprot

Statistics: Mean 26.327; Variance 28.416; scale 0.926

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-I- FUNCTION: INVOLVED IN PEPTIDE BOND SYNTHESIS. STIMULATE EFFICIENT TRANSLATION AND PEPTIDE-BOND SYNTHESIS ON NATIVE OR RECONSTITUTED 70S RIBOSOMES IN VITRO. PROBABLY FUNCTIONS INDIRECTLY BY ALTERING THE AFFINITY OF THE RIBOSOME FOR AMINOACYL-TRNA, THUS INCREASING THEIR REACTIVITY AS ACCEPTORS FOR PEPTIDYL TRANSFERASE (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             burgdorferi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    "Genomic sequence of a Lyme disease spirochaete,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              THEY PREFERENTIALLY INTERACT WITH THEMSELVES IN A HOMOPHILIC MANNER IN CONNECTING CELLS; CADHERINS MAY THUS CONTRIBUTE TO THE SORTING OF HETEROGENEOUS CELL TYPES. E-CADHERIN HAS A POTENT INVASIVE SUPPRESSOR ROLE.

SUBBUNIT: HOMODIMER.
SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
TISSUE SPECIFICITY: NON-NEURAL EPITHELIAL TISSUES.
DISEASE: DEFECTS OF CDH1 IS REGARADED AS ONE OF THE MAIN MOLECULAR EVENTS INVOLVED IN DYSTUNCTION OF THE CELL-CELL ADHESION SYSTEM, TRIGGERING CANCER INVASION (GASTRIC, BREAST, OVARY, ENDOMETRIUM AND THYROLD) AND METASTASIS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AND THYROID) AND METASTASIS. SIMILARITY: BELONGS TO THE CADHERIN FAMILY.

Statistics: Mean 25.549; Variance 30.093; scale 0.849

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT ACCOUNT OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE OF THE PRINCE O
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PT Microparticle encapsulated nucleic acids - for recombinant Microparticles encapsulated nucleic acids - for recombinant PT Microparticles (Column 4; 42pp; English.)

Disclosure; Column 4; 42pp; English.

CC The patent describes a new preparation of microparticles each comprising a polymeric matrix and a nucleic acid. The polymeric matrix consists of one or more synthetic polymers having a solubility CC and at least 90% of the microparticles have a diameter of less than 1 mg/l (e.g. poly-lactic-co-glycolic acid);

CC 100 microns. The microparticles are useful for the delivery of nucleic acid sto phagocytic cells. In one embodiment the microparticles are colless than 20 microns in diameter and the nucleic acid (preferably in CC closed circular form) includes an expression control sequence operatively linked to a coding sequence, where the expression product cof the coding sequence is a polypeptide having a length and a sequence componed in mammals. The present sequence, an antigenic portion of desmoglein 3, is an example of an MHC class I peptide which can be expressed by the nucleic acid. It is associated with pemphigus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

W64816;
A microparticle preparation (MP) has been developed, consisting of microparticles having a diameter of less than 100 mu m. The MP comprises: (a) a polymeric matrix (PM) consisting of one or more synthetic polymers having a solubility in water of less that 1 mg/l; and (b) an expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               LT 3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC clicles) or circular plasmid DNA (at least 50% of which are supercoiled). CC Also described is a MP of at most 20 microns in diameter, comprising: (a) a PM; and (b) a NAM comprising an expression control sequence operatively clinked to a coding sequence, where the coding sequence encodes an coding in length, having a sequence identical to the sequence of: (1) a coding in length, having a sequence identical to the sequence of: (1) a fragment of a naturally-occurring mammalian protein; or (ii) a fragment cof a maturally-occurring mammalian protein; or (ii) a fragment cof a mammal; (2) a peptide having a length and sequence which infects commanded in the coding sequence of the peptide or the sequence. (ii) a mammal; (2) a peptide having a length and sequence which permits it to be indicated to a trafficking sequence. (ii) the polypeptide or the peptide linked to a trafficking sequence. (iii) the polypeptide or the sequence highly effective vehicles for the delivery of polynucleotides into phagocytic cells. They can be used for gene therapy, e.g. for treating genetic diseases, infections or tumours or for downregulating an immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

W07908 represents the human pemphigus vulgaris (PV) antigen extracellular region. The PV antigen is produced in patients with pemphis vulgaris resulting in autoimune disease. PV is a rare relapsing disease causing suprabasal, intra-epidermal bullae (vesicles) of the skin and mucuous membranes, which is fatal if untreated. The PV antigen was fused to a human IgGl hinge region and the resulting fusion protein is useful to treat or diagnose sequence 614 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             through the hinge region used to treat pemphigus foliaceus
Claim 1: Page 10-12: 17pp: Japanese.
This sequence represents a fused protein recognised by pemphigus
C foliaceus patient autoantibody which comprises the constant region
of IgG linked to the extracellular region of pemphigus foliaceus
antigen protein through the hinge portion. Pemphigus foliaceus
a chronic, generalised, vesicular and scaling skin eruption similar
to dermatitis herpetiformis. The pemphigus foliaceus antigen fusion
protein is useful to treat pemphigus foliaceus. The antigen is
c especially administered through an adsorbent upon which the fusion
protein is immobilised via a carrier. The fusion protein is also
useful for detecting pemphigus foliaceus antibodies which is useful
in immondiagnosis. The fusion protein has little or no side effects.

This sequence is the pemphigus vulgaris 130kD antigen. The protein and its encoding DNA may be used in the diagnosis and treatment of pemphigus vulgaris. It is thought that the antigen may be a cell adhesion molecule.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   transgenic plants
Disclosure; Fig 2B; 91pp; English.
Disclosure; Fig 2B; 91pp; English.
The DNA sequence encoding this protein was isolated from cDNA clones selected from a pea nodule cDNA library from the "Sparkle" variety of P.sativum. Pea ASI cDNA was used as a probe.
The protein is produced by expression vectors containing the AS2 coding sequence. Recombinant AS can be used to engineer herbicide resistance, as a dominant selectable marker, to select novel herbicides or compounds useful for synchronising plant cells in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WO9013633-A.

There are several regions of high local homology (greater than 80%) shared between the pea AS and human AS polypeptides.

ALAMERA SOCOCOSOSOS
            PS. Claim 12: Page 407: 483pp; English.

CC This sequence represents a Streptococcus pneumoniae protein that, based con homology with an Escherichia coll protein, is a aspartate ammonia con homology with an Escherichia coll protein, is a aspartate ammoniae con homology with an Escherichia coll protein, is a aspartate ammoniae con homology with a sequence of the invention.

CC The DNA sequences were isolated from Streptococcus pneumoniae strain collops; (NCIMB 40794). The Streptococcus pneumoniae proteins of the collops; (NCIMB 40794). The Streptococcus pneumoniae proteins of the collops; (NCIMB 40794). The Streptococcus pneumoniae proteins can be used to induce an immunological response considering nucleic acids in a vector adequate to produce antibody con a mammal by inoculation with the S. pneumoniae proteins or delivery cof the encoding nucleic acids in a vector adequate to produce antibody conform the collops of inhibiting their bloactivity. In particular the proteins of companies can also be used to identify antimicrobial compounds which are companies can be used to prevent adhesion of bacteria to mammalian conformations of pathogenesis in infections initiated other than by the companies to protein of pathogenesis in infections initiated other than by the companies to the conformal techniques.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; Fig 2A: 91pp; English.

The DNA sequence encoding this protein was isolated from cDNA clones selected from a pea nodule cDNA library from the "Sparkle" variety of P.sativum. Human AS cDNA was used as a probe.

The protein is produced by expression vectors containing the ASI coding sequence. Recombinant AS can be used to engineer herbicide resistance, as a dominant selectable marker, to select novel herbicides or compounds useful for synchronising plant cells in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (UYRO-) ROCKFELLER UNIV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PT Polynucleotide(s) encoding human protocadherins pc3 and pc4 and rat professionand reell-cell adhesion and regulation activities
PS Claim 17; Page 130-132; 146pp; English.
CC R86865-R86867 represent the sequences for three protocadherins. This
CC R86865-R86867 represents the rat prococadherin pc5. These sequences are
CC related to cadherin, and possess cell adhesive ability. Cadherins are
CC glycosylated integral membrane proteins that are involved in cell-cell
CC adhesion. Cadherins are composed of an N-terminal extracellular domain
CC which consists of 5 unique subdomains, a membrane spanning domain, and a
CC cterminal cytoplasmic domain. The cytoplasmic domain interacts with the
CC cytoplasmic domain is not present in all cadherins, but in those
CC which possess it, it is essential for the cadherins adhesive function.
CC The cytoplasmic domain is not present in all cadherins, but in those
CC which possess it, it is essential for the cadherins adhesive function.
CC The cadherins which do not possess a cytoplasmic domain appear to
CC function via a different method from those with a cytoplasmic domain.
CC These sequences were isolated using primers 1 and 2 (see T03575 and
CC T03576) The proteins may have regulatory functions in the cell, as well
CC as the cell-cell adhesive properties. Antibodies produced against these
CC sequences are useful for modulating the binding activity of these
CC Sequences and can be used therapeutically.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
